1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 8, 11, and 15-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Dätwylet et al (US 5,003,174).

See window 4, which is a stepped element with protruding stem 5 having an end surface 22 and having a sealing surface 7. The element serves as a window to a flow cell; see the figure. E length of the stem defines the path length; see column 5, line 61 through column 6, line 2.

4. Claims 2-7, 9-10, 12-14, 20 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dätwylet et al (US 5,003,174).

See above. It would have been obvious to make the windows out of any appropriate transparent material. It is known in the art to include lenses, either separately or by forming curved surfaces in the window, in sample cells; doing so in the device of Dätwylet et al would have been obvious. Those in the art could make design changes to the window and arrangement of Dätwylet et al such as varying the shape of the window while maintaining the functional aspects of the window and cell structure.

5. Wynn (US 5,905,271) shows a similar cell with stepped windows; see elements 16 and 17 and column 2, lines 14-29. Shields (US 3,552,864) and Goldsmith (US 4,580,901) show cells with stepped windows; see element 1 in figure 3 of Shields and window 13 (see column 5, lines 31-36) of Goldsmith.

6. Papers related to this application may be submitted to Group 2800 by facsimile transmission. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (15 November 1989). The fax number is (703) 308-7722.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to R. A. Rosenberger whose telephone number is (703) 308-4804.
